

Customer Story

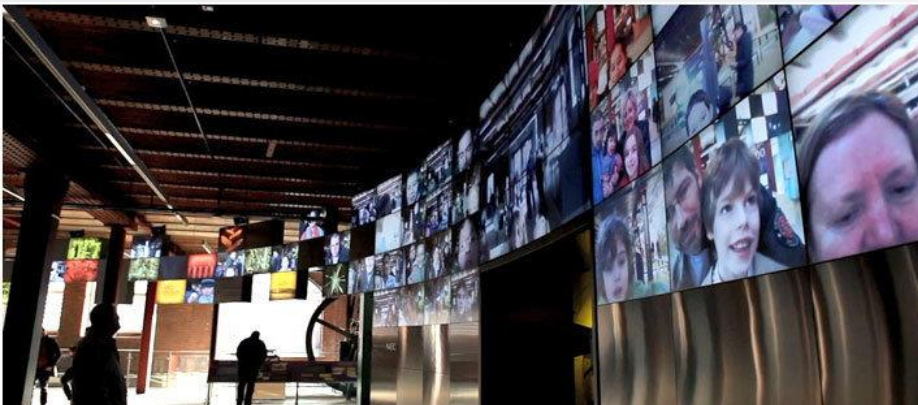

Museum of Science & Industry

Revolution Manchester Gallery

In 2010 the Museum of Science and Industry in Manchester embarked on a £9 million redevelopment programme to improve the visitor experience.

At the heart of this would be the Revolution Manchester Gallery, which would become the entrance to the museum and introduction to the museum as a whole, giving an overview of the themes and galleries that can be found throughout MOSI

Kin Design was commissioned to develop the design for the gallery, which included a fifty screen curved media-wall, MOSI approached Pure Audio Visual to provide a solution that could deliver Kin's content vision to the large video wall, touch screens and digital sculpture.

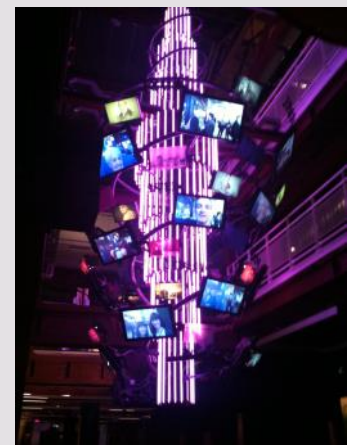

Standing 8 metres high, the spectacular sculpture at the centre of the gallery features one hundred and ninety LED tubes and twenty four LCD screens.

Working to tight timescales in an exciting but challenging environment, Pure AV created a robust system that creatively presents the MOSI story to thousands of visitors each year.

£9 million redevelopment programme to improve the visitor experience

Specialists in the provision of Audio visual solutions. Pure AV is a leading technology solutions provider, offering consultancy, solution design, installation, service and support to organisations across the UK. Additional projects completed in this sector include:
